

## **Saka or Persians?**

Sharon Turner – 1768-1847

This is the question which Sharon Turner (1768-18747), an English historian of the XVIII century, examined; in 1827 he published an article in English language devoted to this problem.

The history of Anglo-Saxons was published by the author in 4 volumes.

The scientists' researches are based on real surveys, which arise many questions in the field of Anglo-Saxons' history. For example, according to the definition made by Herodotus, Persians called Scythians "Sakai". Sharon Turner identified them as Anglo-Saxons' ancestors. Turner wrote, "migrating Scythians crossed the Aras river, while coming from Asia, and suddenly appeared in Europe in the VI century B.C. The terms "Saxon" and "Scythian" had been used as synonyms".

Anglo-Saxons' history told that their ancestors were Saka. In due time, Saka advanced from Caspian area to the East and settled not only in Bactria, but on a fertile plot in Armenia as well. Plinius called the people, who settled on that plot, Saka-suni. His pronunciation saka-suni is similar to the name "Saka sons" (heirs). If a statement, that Saxons came from Asia could be asserted, there would be a chance to prove that Saxons' roots come from Asia as a result of gradual migration from Caspian Sea to German ocean (Atlantic ocean).

The author assures that if ancestors of two kins had lived together, in the same area, even after a period of 2000 years had passed; it would have been reflected and would have left a noticeable trace. Such similarity the author analyzed only through the Anglo-Saxons' roots, in the hope that Anglo-Saxon language is similar to modern Persian.

If to compare all the data, we can make an example, that 162 Persian words and their meanings, given in material are identical with Anglo-Saxon words.

Adil Akhmetov, Doctor of Philological Sciences, academician of Russian and Kazakhstan international academy, had lived in the USA for several years due to his occupation. He wrote quite a few interesting scientific works, related to the life of "Hindus". One of the main results of his research work consists in the fact that Hindus are of Altay origin. Books which A. Akhmetov devoted to the "Hindus" ancestors, i.e. "Asia-Beringia-America", "Code of Eurasia", "On the eve of the fifth civilization", etc., clearly indicate that the author resumes scientifically-based origin of the hindus.

Reader will find reliable researches and weighty arguments in the article.

Being Ambassador Extraordinary and Plenipotentiary of the Republic of Kazakhstan in Great Britain, statesman did not forget about his devotion to historic research activities. He managed to collect historic materials about Asian origin of Anglo-Saxons. One of those works is an article of British scientist Sharon Turner.

This article and an attached thesaurus have been translated directly from English to Kazakh by the author of material, a scientist Adil Akhmetov.
